

Activity Selection Problem

Book: Cormen; Section: 16.1

An Activity Selection Problem

- **Input:** A set of activities $S = \{a_1, \dots, a_n\}$
- Each activity has start time and a finish time
 - $a_i = (s_i, f_i)$
- Two activities (a_i, a_j) are **compatible** if and only if their interval does not overlap
 - $s_i \geq f_j$ **OR** $s_j \geq f_i$
- **Output:** a maximum-size subset of mutually compatible activities

Example (Page - 415)

- Here are a set of start and finish times

Activity No (i)	1	2	3	4	5	6	7	8	9	10	11
Start time (s_i)	1	3	0	5	3	5	6	8	8	2	12
Finish time (f_i)	4	5	6	7	9	9	10	11	12	14	16

- What is the maximum number of activities that can be completed?
 - $\{a_3, a_9, a_{11}\}$ can be completed
 - But so can $\{a_1, a_4, a_8, a_{11}\}$ which is a larger set
 - But it is not unique, consider $\{a_2, a_4, a_9, a_{11}\}$

Interval Representation

Activity No (i)	1	2	3	4	5	6	7	8	9	10	11
Start time (s_i)	1	3	0	5	3	5	6	8	8	2	12
Finish time (f_i)	4	5	6	7	9	9	10	11	12	14	16

Greedy-choice property: Early Finish

- Select the activity with the earliest finish
- Eliminate the activities that could not be scheduled
- Repeat

Why Greedy?

- Greedy in the sense that it leaves as much opportunity as possible for the remaining activities to be scheduled
- The greedy choice is the one that maximizes the amount of unscheduled time remaining

Algorithm : Recursive (Page-419)

//Assuming activities are sorted by finish time

RECURSIVE-ACTIVITY-SELECTOR($s, f, 0, n$).

RECURSIVE-ACTIVITY-SELECTOR(s, f, k, n)

```
1   $m = k + 1$ 
2  while  $m \leq n$  and  $s[m] < f[k]$       // find the first activity in  $S_k$  to fi
3       $m = m + 1$ 
4  if  $m \leq n$ 
5      return  $\{a_m\} \cup \text{RECURSIVE-ACTIVITY-SELECTOR}(s, f, m, n)$ 
6  else return  $\emptyset$ 
```

Algorithm : Non Recursive (Page-421)

//Assuming activities are sorted by finish time

```
GREEDY-ACTIVITY-SELECTOR( $s, f$ )
1   $n \leftarrow \text{length}[s]$ 
2   $A \leftarrow \{a_1\}$ 
3   $i \leftarrow 1$ 
4  for  $m \leftarrow 2$  to  $n$ 
5      do if  $s_m \geq f_i$ 
6          then  $A \leftarrow A \cup \{a_m\}$ 
7               $i \leftarrow m$ 
8  return  $A$ 
```

Thank You
